

Coronary Artery Disease FocusClass

Coronary artery disease is one of the most common indications for echocardiography. Unfortunately, it is also one of the most challenging topics to master. This chapter provides valuable tips to assess wall motion abnormalities, quantify left ventricular function (including strain/speckle tracking imaging), and demonstrate how to differentiate ischemic from dilated cardiomyopathy complications. As in the other chapters, we provide many examples and background knowledge relevant to acute coronary syndromes and chronic coronary artery disease. This course is also included in Echo MasterClass.

Coronary Artery Disease FocusClass

Have you ever struggled with the assessment of regional wall motion abnormalities? Can you differentiate ischemic from dilated cardiomyopathy? In this chapter you will find lots of examples and background knowledge that will help you to excel.

Lectures & Quizzes:

- Introduction
- Segmental Approach
- Wall Motion
- Remodeling
- Differential Diagnosis
- Complications - Part 1
- Complications - Part 2
- Quiz - Coronary Artery Disease
